

TERRAN BLAKE // Lab Report 9 // ECE 241
April 4, 2016

	5 volts setting			
		1.5 volts	2.5 volts	3.0 volts
Analog Discovery Measurement:		1.504 volts	2.528 volts	3.018 volts
Arduino Serial Measurement:		1.6260 volts	2.7441 volts	3.2818 volts

- Picture 1: 5.0 Volt Power Supply: 1.5 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 2: 5.0 Volt Power Supply: 2.5 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 3: 5.0 Volt Power Supply: 3 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 4: Voltage Readings from the Analog Discovery and Arduino in an Excel Document

Question 1: The percent of error that was measured between the Arduino(Computed reading) and the Analog Discovery(Calculated reading) , limited to 5.0 Volts, was 5.25% overall.

	3.3 volts setting			
		1.5 volts	2.5 volts	3.0 volts
Analog Discovery Measurement:		1.496 volts	2.512 volts	3.004 volts
Arduino Serial Measurement:		1.4792 volts	2.4943 volts	2.9745 volts

- Picture 5: 3.3 Volt Power Supply: 1.5 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 6: 3.3 Volt Power Supply: 2.5 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 7: 3.3 Volt Power Supply: 3 Volt Potentiometer Reading on Analog Discovery and Arduino
- Picture 8: Voltage Readings from the Analog Discovery and Arduino in an Excel Document

Question 2: The percent of error that was measured between the Arduino(Computed reading) and the Analog Discovery(Calculated reading), using the 3.3 Volts reference, was 0.58% overall. In comparison to the error for the 5.0 Volt reference, the 3.3 Volts reference was more accurate by over 4%.

Question 3: The relative errors are very consistent between the various values measured, even when the Potentiometer is being changed at a rapid pace.

CODE:

Added 3.3 Volt Reference Code

```
void setup() {  
  Serial.begin(9600);  
  analogReference(EXTERNAL);  
}  
  
unsigned long oldMillis = 0;  
  
void loop() {  
  unsigned long currentMillis = millis();  
  int interval = 500;  
  int SampleFromADC;  
  
  if (millis() - oldMillis >= interval) {  
    SampleFromADC = analogRead(0);  
    analogWrite (10, SampleFromADC/4);  
    Serial.print(SampleFromADC);  
    Serial.print( " = " );  
    Serial.print( 3.3 * 5.0 * SampleFromADC / 1024.0, 4 );  
    Serial.println( " volts " );  
    oldMillis += interval;  
  }  
}
```
